

Data Flow Diagram

Date	7 July 2026
Team ID	SWTID-2026-2018
Project Name	Credit Card Approval Prediction
Maximum Marks	2 Marks

Process

Symbol	Name	Description
Oval / Rounded shape	External Entity	Applicant (User) Bank Officer
Rectangle with numbered header	Process	Collect Applicant Details Data Preprocessing Credit Card Approval Prediction Display Result
Rectangle (solid fill, no number)	Data Store	Applicant Database Trained ML Model Results Database
Labeled arrow	Data Flow	Applicant submits personal and financial details. Applicant details are stored in the Applicant Database. Data preprocessing handles missing values and encodes categorical data. Processed data is sent to the Credit Card Approval Prediction model. The trained ML model predicts approval or rejection. Results are displayed to the applicant and bank officer. Prediction results are optionally stored in the Results Database.

Data Flow Details

From	To	Data Flow
Applicant	Enter Applicant Details	Applicant Information
Enter Applicant Details	Validate Input Data	User Input
Validate Input Data	Preprocess Input	Validated Applicant Data
Preprocess Input	Trained Model Files	Processed Feature Vector
Trained Model Files	Generate Prediction	Prediction Model
Generate Prediction	Display Prediction Result	Eligibility Status, Confidence Score, Risk Level
Display Prediction Result	Applicant	Final Prediction Result
